

Project 3 - NASA (Not Average Selling App)

August 3, 2019

Project Members

- Marilyn Wadsworth
- Serena Brown
- Gezahegn Hika
- Paul Raab

Project Title

MVP

- Buy/Sell application - Our application will provide a platform to upload/purchase/allow communication between users to sell items.
- Why is a buting/selling app valuable? - This app will be useful because users can easily fill out a form and post items on the platform easily to sell.
- This app is strictly for people wanting to get rid of items, not merchandise. (kind of like Craigslist, but just selling items and easier to use).
- This app will be useful for people looking for a good deal and not wanting to by brand new items, ex: students looking for a microwave.

Screen Layouts

Selling/ Buying App

Sell Items

Someone Bought an Item!

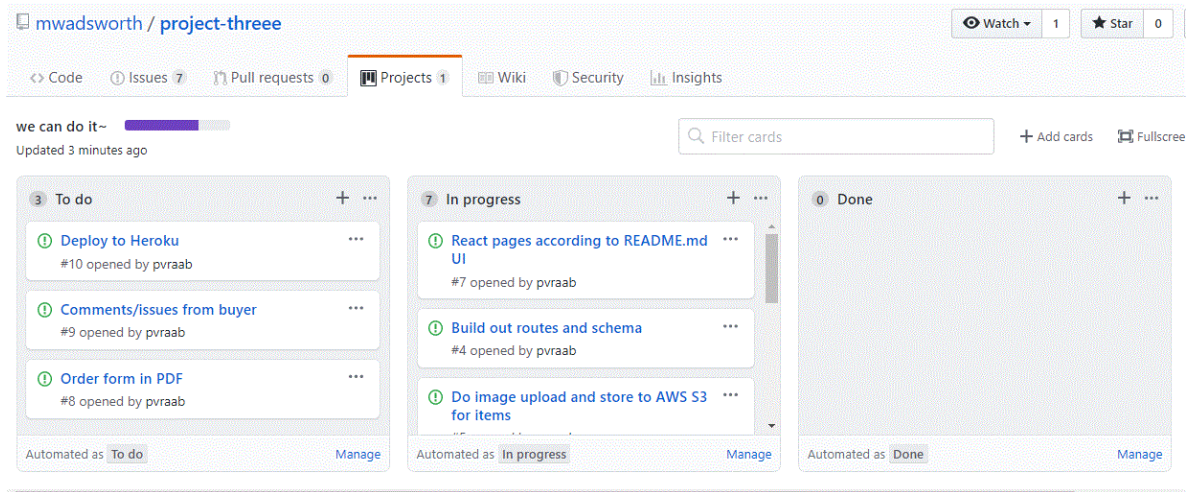

this will be a nice to have

Potentially have:

- Item name
- img
- Buyer contact info
- Payment
- Comment/messages sent from buyer.

Nice to Have - Additional Screens

Project Management

Technology Stack

- Technology our app will most likely use
- KanBan
- Node/Express
- Passport
- MongoDB/ Mongoose ORM
- React
- ReactStrap
- StyledComponents
- SASS
- Heroku
- AWS/S3

Who's Doing What?

Dataflow: Paul Making it pretty (React): Marilyn /Serena Express server: Serena Paul Database: Gezu

Fun To Have
